

Breaking Head

Breaking Head is an open source card game about the Drupal.org issue queue based on the game **Saboteur** designed by Frederic Moyersoen.

This game makes the assumption that there are bad people in the issue queue on drupal.org - this is not the case! Luckily the Drupal community consists of very friendly contributors always willing to help each other. But sometimes working in the queue can be depressing and this game covers situations when people have the feeling that progress is willingly blocked for no good reason.

Basics

The game is about an Drupal.org issue which all players will 'work' on during the game and players are assigned to a team. The **Contributors** have to get their issue "Fixed & Committed" while the team of **Blockers** need to prevent this until the game has ended. The teams win and loose as a whole. As every player only knows his own role for sure, the interesting part of this game is about finding out the other players assignment while trying to keep your own secret.

Players: 3 - 10, Minimum age: 8 (you should have heard about Drupal and know what an issue is)

Contents

66 **Playable** cards (Blue back)
11 **Player** cards (Red back)
4 **Special** cards (Green back)

Preparation

First make sure **playable**, **player** and **special** cards are apart from each other.

Based upon the total count of players use the following **player** cards:

3 Players: 3 Contributors, 1 Blocker

4 Players: 4 Contributors, 1 Blocker

5 Players: 4 Contributors, 2 Blockers

6 Players: 5 Contributors, 2 Blockers

7 Players: 5 Contributors, 3 Blockers

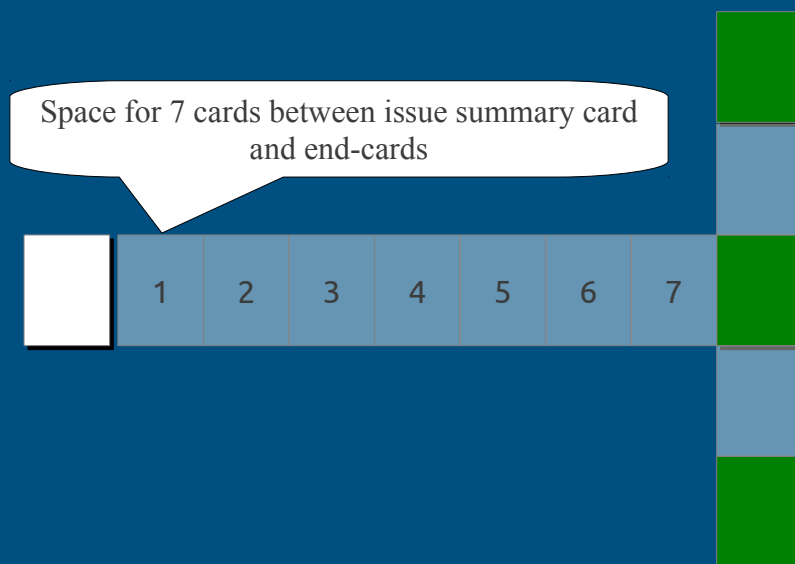

8 Players: 6 Contributors, 3 Blockers

9 Players: 7 Contributors, 3 Blockers

10 Players: Use all player cards

Mix them and randomly distribute them covered to all players. Each player can now take a look at the role he was assigned for this round but should not tell it anyone until the end of the game.

Now lay the **Issue summary special card** uncovered at one end of the table. Mix the remaining **3 end-cards** and put them covered at the other end of the table, resulting in the following:

Every player also gets a few **playable cards** at the beginning:

3 – 5 Players: 6 cards per player

6 – 7 Players: 5 cards per player

8 – 10 Players: 4 cards per player

The rest of these cards are placed covered and easily reachable, somewhere on the table.

Used cards are not reused during a round and should be collected on an extra pile.

Rounds

Beginning from a randomly chosen player, everyone gets to his turn clockwise.

Each turn a player **must first play a card**, either by putting one on the table (comment on the issue), by playing an action card or by passing (throwing a card onto the used-cards-pile).

Then a player **must draw a card** from the pile of unused cards as long as there are cards left.

End

The game ends either when the issue has been successfully fixed & committed (contributors win) or when there are no more cards left to play in the hands of any player (blockers win).

Now all the players uncover their true assignment and the winning team can mock the losers.

Playing a card

Comment cards are played by laying them on the table with the ultimate target to connect the issue summary with the committed & fixed end-card. As soon as there is a continuous path from the start card to one of the end cards – the connected end-card will be uncovered.

All comment cards must be played in the same orientation and if there's a connection (a black bar) at the border of a card, the neighbor card on that side must have a connection as well.

There are a few special comment cards called dead-ends. These cards can be identified by their white stripes within the black connection bars and they have the same rules as the normal comment cards but their connection does not count. This means that if there are several connected comment cards building a path to an end-card but there is one dead-end card within this continuous path, the path is invalid and the end-card may not be uncovered until it is bypassed or replaced.

Action cards are playable cards that have their functionality captioned.

- **WTF Dries?!**: Allows a player to choose one of the end-cards and to take a look at it (privately).
- **Spam!:** Allows a player to remove a single but any comment card from the table.
- **Blocked!:** Blocks a player with a specific problem. When a player is blocked he is not allowed to comment on the issue. Each player can be blocked with multiple problems but each must be of a different kind. (Problems are: Broken Wi-Fi, Drupal-Flu, Broken Head)
- **Unblocked!:** Unblocks a blocked player by resolving a specific problem (LAN fixes broken Wi-fi, Vitamins cure Drupal-Flu and a fixed head fixes a broken head). One unblocking card removes one blocking card with the appropriate symbol. There are unblocking cards with multiple symbols that are able to resolve one of multiple problems.

Passing

If you are not able to play a card or you just don't want to, you still have to put one of your cards on the used-cards-pile and draw a new one.
